

"Symmetrical 10 gig speeds for enterprise customers, including large institutions such as government"

# Powering Smart Cities

Charter's advanced network and wireless IoT technologies will enable devices to gather and analyze data, making communities "smart" in order to improve public services and enhance the lives of their residents.

## Advanced Fiber Network

- Two-way, fully interactive digital network
- 700,000 miles of network infrastructure, passing 50 million homes and businesses

## Superior High Speed Broadband

- Starting speed of 100 Mbps in more than 99% of communities served; 200 Mbps in nearly 40% of our footprint
- Offering gigabit connections to more than 27 million homes; plan to offer across virtually our entire service area in 2018
- Symmetrical 10 gig speeds for enterprise customers, including large institutions such as government

## Pervasive Wireless

- Carries over 80% of WiFi traffic with over 250 million wireless devices attached to advanced WiFi network
- Launching high-value, competitive mobile service in 2018
- Testing next-gen 4G LTE and 5G technologies in markets across the country
